

-----TEST LOG-----
Dragons, Wizards, and Knights

Date of Software Test: 24 July 2024

Name of Software Tester: Yusyra Hossain

Game Functionality			
INPUT DATA	EXPECTED OUTPUT	GENERATED OUTPUT	REQUIRED FIXES MADE
1	Output Choice and Computer Choice	Displays Computer Choice too early	Move the subroutine of computerChoice under the if statement inside while loop
4	Exit Loop	Does not exit, Continues game	End loop by making it =false if 4 is inputted Add a condition of input != 4 for loop to run
End of game	Loop and show the menu again	1. Out-of-bounds exception due to array size 2. Game does not loop	1. Add one to size of array 2. Add another while loop in main method
2nd Game	Start from Round 1 again	Continues from the previous game	Initialize the round number back to 0 as soon as stats are displayed.
2	Output Choice and Computer Choice	Output Choice and Computer Choice	N/A User Interface: Fix Spelling
4	Exit Loop	Exit Loop	N/A
End of game	Loop and show the menu again	Loop and show the menu again	N/A User Interface: Put space in between loops
2nd Game	Start from Round 1 again	Start from Round 1 again	N/A

Valid and Invalid Data			
INPUT DATA	EXPECTED OUTPUT	GENERATED OUTPUT	REQUIRED FIXES MADE
1	You have chosen Dragon	You have chosen Knight	Logic Error; fix if statement
65	Invalid Option, Loop	Program Ends	Make input restricted to numbers 1-3 using if statement
scissor	Invalid Input, Loop	NumberFormatException	Add a try-and-catch statement to catch this error and display an error message Add while statement for loop
2	You have chosen Knight	Program Loops	Make loop = false if correct input typed in
4.57A	Invalid Input, Loop	Invalid Input, Loops	N/A User Interface: Put space in between loops
-54	Invalid Option, Loop	Invalid Option, Loops	N/A

3	You have chosen Wizard	You have chosen Wizard	N/A User Interface: Fix Spelling
---	------------------------	------------------------	-------------------------------------

Game Logic			
STAGE OF GAME	EXPECTED OUTPUT	GENERATED OUTPUT	REQUIRED FIXES MADE
Dragon V.S Wizard	Give point to Dragon	This part is skipped completely	Forgot to call this method in main method
Dragon V.S Knight	Give point to Knight	Program Crashes	Forgot to import a parameter into subroutine (roll number)
Knight V.S Wizard	Give point to Wizard	Point is given to Knight	Logic Error: Change boolean operator to && in determineWinner Method
Dragon V.S Wizard	Give point to Dragon	Give point to Dragon	N/A User Interface: Add Space
Dragon V.S Knight	Give point to Knight	Give point to Knight	N/A User Interface: Fix Spelling
Knight V.S Wizard	Give point to Wizard	Give point to Wizard	N/A

Points Calculation			
STAGE OF GAME	EXPECTED OUTPUT	GENERATED OUTPUT	REQUIRED FIXES MADE
Show Computer & User Points for round	Show correct Computer & User Points for round according to game logic	Program Crashes	One subroutine cannot update points for both computer and User Points. Create two different methods Forgot to define a parameter of subroutine
Show total Computer & User Points of game so far	Show total Computer and User points so far in game by adding all points together	1. Program Crashes 2. User points and computer points are the same	1. Change loop requirement from i- to i++ 2. Logic Error: user points are being displayed for both. Change one of the user points to computer points to display correct computer points.
Determine winner based on points	Determine correct winner based on points	Even though computer had more points, user won	Logic Error; change requirement in if statement from playerPoints < computerPoints to playerPoints > computerPoints
1st Game Histogram	Show points by round number	Shows points by number but skips the first round	In the for loop for showing points, start printing out the array from roundNumber+1 (points[i+1])
2nd Game Histogram	Show points by round number	Shows points by round number, but adds in points per round from last game	Initialize array values back to zero before start of new game in main method
Show Computer & User Points for round	Show correct Computer & User Points for round	Shows correct Computer & User Points for round according to game logic	N/A

	according to game logic		
Show total Computer & User Points of game so far	Show total Computer and User points so far in game by adding all points together	Correctly shows total Computer and User points so far	N/A User Interface: Put space
Determine winner based on points	Determine correct winner based on points	Determines correct winner based on points	N/A User Interface: Put a congratulatory message
1st Game Histogram	Show points by round number	Shows points by round number	N/A User Interface: Put each round in separate lines
2nd Game Histogram	Show points by round number	Shows points by round number	N/A
